Package ‘RcppRoll’

June 5, 2018

Type Package
Title Efficient Rolling / Windowed Operations
Version 0.3.0
Date 2018-06-05
Author Kevin Ushey
Maintainer Kevin Ushey <kevinushey@gmail.com>
Description Provides fast and efficient routines for common rolling / windowed operations. Routines for the efficient computation of windowed mean, median, sum, product, minimum, maximum, standard deviation and variance are provided.
License GPL (>= 2)
Depends R (>= 2.15.1)
Suggests zoo, testthat
Imports Rcpp
LinkingTo Rcpp
RoxygenNote 6.0.1
NeedsCompilation yes
Repository CRAN
Date/Publication 2018-06-05 18:35:35 UTC

\begin{itemize}
\item RcppRoll ........................................... 2
\item RcppRoll-exports .................................. 2
\end{itemize}

Index 5
Description

This package implements a number of 'roll'-ing functions for R vectors and matrices.

Details

Currently, the exported functions are:

- roll_max
- roll_mean
- roll_median
- roll_min
- roll_prod
- roll_sd
- roll_sum
- roll_var

Usage

```
roll_mean(x, n = 1L, weights = NULL, by = 1L, fill = numeric(0),
          partial = FALSE, align = c("center", "left", "right"), normalize = TRUE,
          na.rm = FALSE)
```

```
roll_meanr(x, n = 1L, weights = NULL, by = 1L, fill = NA,
           partial = FALSE, align = "right", normalize = TRUE, na.rm = FALSE)
```

```
roll_meanl(x, n = 1L, weights = NULL, by = 1L, fill = NA,
           partial = FALSE, align = "left", normalize = TRUE, na.rm = FALSE)
```

```
roll_median(x, n = 1L, weights = NULL, by = 1L, fill = numeric(0),
            partial = FALSE, align = c("center", "left", "right"), normalize = TRUE,
            na.rm = FALSE)
```
roll_medianr(x, n = 1L, weights = NULL, by = 1L, fill = NA, partial = FALSE, align = "right", normalize = TRUE, na.rm = FALSE)

roll_medianl(x, n = 1L, weights = NULL, by = 1L, fill = NA, partial = FALSE, align = "left", normalize = TRUE, na.rm = FALSE)

roll_min(x, n = 1L, weights = NULL, by = 1L, fill = numeric(0), partial = FALSE, align = c("center", "left", "right"), normalize = TRUE, na.rm = FALSE)

roll_minr(x, n = 1L, weights = NULL, by = 1L, fill = NA, partial = FALSE, align = "right", normalize = TRUE, na.rm = FALSE)

roll_minl(x, n = 1L, weights = NULL, by = 1L, fill = NA, partial = FALSE, align = "left", normalize = TRUE, na.rm = FALSE)

roll_max(x, n = 1L, weights = NULL, by = 1L, fill = numeric(0), partial = FALSE, align = c("center", "left", "right"), normalize = TRUE, na.rm = FALSE)

roll_maxr(x, n = 1L, weights = NULL, by = 1L, fill = NA, partial = FALSE, align = "right", normalize = TRUE, na.rm = FALSE)

roll_maxl(x, n = 1L, weights = NULL, by = 1L, fill = NA, partial = FALSE, align = "left", normalize = TRUE, na.rm = FALSE)

roll_prod(x, n = 1L, weights = NULL, by = 1L, fill = numeric(0), partial = FALSE, align = c("center", "left", "right"), normalize = TRUE, na.rm = FALSE)

roll_prodr(x, n = 1L, weights = NULL, by = 1L, fill = NA, partial = FALSE, align = "right", normalize = TRUE, na.rm = FALSE)

roll_prodl(x, n = 1L, weights = NULL, by = 1L, fill = NA, partial = FALSE, align = "left", normalize = TRUE, na.rm = FALSE)

roll_sum(x, n = 1L, weights = NULL, by = 1L, fill = numeric(0), partial = FALSE, align = c("center", "left", "right"), normalize = TRUE, na.rm = FALSE)

roll_sumr(x, n = 1L, weights = NULL, by = 1L, fill = NA, partial = FALSE, align = "right", normalize = TRUE, na.rm = FALSE)

roll_suml(x, n = 1L, weights = NULL, by = 1L, fill = NA, partial = FALSE, align = "left", normalize = TRUE, na.rm = FALSE)

roll_sd(x, n = 1L, weights = NULL, by = 1L, fill = numeric(0),
partial = FALSE, align = c("center", "left", "right"), normalize = TRUE, na.rm = FALSE)

roll_sdr(x, n = 1L, weights = NULL, by = 1L, fill = NA,
partial = FALSE, align = "right", normalize = TRUE, na.rm = FALSE)

roll_sd1(x, n = 1L, weights = NULL, by = 1L, fill = NA,
partial = FALSE, align = "left", normalize = TRUE, na.rm = FALSE)

roll_var(x, n = 1L, weights = NULL, by = 1L, fill = numeric(0),
partial = FALSE, align = c("center", "left", "right"), normalize = TRUE, na.rm = FALSE)

roll_varr(x, n = 1L, weights = NULL, by = 1L, fill = NA,
partial = FALSE, align = "right", normalize = TRUE, na.rm = FALSE)

roll_varl(x, n = 1L, weights = NULL, by = 1L, fill = NA,
partial = FALSE, align = "left", normalize = TRUE, na.rm = FALSE)

Arguments

x A numeric vector or a numeric matrix.
n The window size. Ignored when weights is non-NULL.
weights A vector of length n, giving the weights for each element within a window. If
NULL, we take unit weights of width n.
by Calculate at every by-th point rather than every point.
fill Either an empty vector (no fill), or a vector (recycled to) length 3 giving left,
middle and right fills.
partial Partial application? Currently unimplemented.
align Align windows on the "left", "center" or "right".
normalize Normalize window weights, such that they sum to n.
na.rm Remove missing values?

Details

The functions postfixed with 1 and r are convenience wrappers that set left / right alignment of the
windowed operations.
