Package ‘SGPdata’

April 10, 2018

Type Package

Title Exemplar Data Sets for Student Growth Percentiles (SGP) Analyses

Version 20.0-0.0

Date 2018-4-9

Maintainer Damian W. Betebenner <dbetebenner@niea.org>

Depends R (>= 3.2)

Suggests SGP (>= 1.4-0.0), knitr, rmarkdown

Imports crayon, data.table (>= 1.9.6)

Description Data sets utilized by the ‘SGP’ package as exemplars for users to conduct their own student growth percentiles (SGP) analyses.

---|---|

Description

The 'SGPdata' package contains four exemplar data sets utilized by the 'SGP' package for testing and examples.

Details

- Package: SGPdata
- Type: Package
- Version: 20.0-0.0
- Date: 2018-4-9
- License: GPL-3
- LazyLoad: Yes
- LazyData: Yes

| sgpData | Longitudinal Student Assessment Data |
---|---|

Description

A dataset comprising a subset of five years of state assessment reading data suitable for student growth percentile and percentile growth projection/trajectory analyses. The dataset is used in examples provided in the documentation for the studentGrowthPercentiles and studentGrowthProjections functions, and serves as an exemplar for user construction of their own datasets for growth percentile analyses.

Format

A data frame of student level observations for five years on the following variables.
ID  Student ID
GRADE_2014  Student Grade Tested 2013, possibly missing
GRADE_2015  Student Grade Tested 2014, possibly missing
GRADE_2016  Student Grade Tested 2015, possibly missing
GRADE_2017  Student Grade Tested 2016, possibly missing
GRADE_2018  Student Grade Tested 2017, possibly missing
SS_2014    Student Scale Score 2013, possibly missing
SS_2015    Student Scale Score 2014, possibly missing
SS_2016    Student Scale Score 2015, possibly missing
SS_2017    Student Scale Score 2016, possibly missing
SS_2018    Student Scale Score 2017, possibly missing

Note
All datasets used with studentGrowthPercentiles and studentGrowthProjections must be specifically formatted as wide format files. The first variable/column is the student ID variable. The next set of columns provide the grade of the student across all the years provided in the dataset (possibly missing). The last set of columns provide the scales scores of the student in the respective grades. Multi-year operational analyses benefit from putting data in long format. See sgpData_LONG and associated documentation for a comprehensive account.

sgpData_LONG
Format

A data frame of student level observations for five years and two content areas for the following variables.

- **id** Unique Student Identification Number
- **content_area** Content area for student/teacher record (Reading or Mathematics)
- **year** Year for student/teacher record
- **instructor_number** Unique instructor number identifier
- **instructor_last_name** Instructor last name
- **instructor_first_name** Instructor first name
- **instructor_weight** Proportional weight associated with student/teacher record
- **instructor_enrollment_status** Indicator of full enrollment status of student with teacher

sgpData_LONG

*Longitudinal Student Assessment Data in LONG format*

Description

A dataset comprising a subset of five years of state assessment reading and mathematics data suitable for student growth percentile (SGP) and percentile growth projection/trajectory analyses. The dataset is in LONG format with each record representing a unique student, by year by content area combination. The example data is used in examples and illustration in the enclosed documentation to show how SGPs can be operationalized across years with the results being used to produce a variety of high quality visualizations both at the aggregate (e.g., school) and individual level.

Format

A data frame of student level observations for five years and two content areas for the following variables.

- **id** Unique Student Identification Number
- **last_name** Student last name
- **first_name** Student first name
- **content_area** Content area for student observation (Reading or Mathematics)
- **year** Year for student observation
- **grade** Grade level of student observation
sgpData_LONG

SCALE_SCORE  Student Scale Score
ACHIEVEMENT_LEVEL  Achievement level associated with student scale score
GENDER  Student gender
ETHNICITY  Student ethnicity
FREE_REduced_LUNCHe_STATUS  Student free/reduced lunch status
ELL_STATUS  Student English Language Learner status
IEP_STATUS  Student Individual Education Plan status
GIFTED_AND_TALENTED_PROGRAM_STATUS  Student Gifted and Talented Program status
SCHOOL_NUMBER  School number associated with student record
SCHOOL_NAME  School name associated with school number and student record
EMH_LEVEL  Elementary, Middle, High school indicator for school attended
DISTRICT_NUMBER  District number associated with student record
DISTRICT_NAME  District name associated with school number and student record
SCHOOL_ENROLLMENT_STATUS  Indicator of full academic year student enrollment in school
DISTRICT_ENROLLMENT_STATUS  Indicator of full academic year student enrollment in school
STATE_ENROLLMENT_STATUS  Indicator of full academic year student enrollment in school
VALID_CASE  Indicator of whether the case is valid or invalid

Note

All datasets used with studentGrowthPercentiles and studentGrowthProjections must be specifically formatted as wide format files. The first variable/column is the student ID variable. The next set of columns provide the grade of the student across all the years provided in the dataset (possibly missing). The last set of columns provide the scales scores of the student in the respective grades. Operational users of this package are advised to use data formatted similar to the sgpData_LONG with the higher level functions prepareSGP, analyzeSGP, combineSGP, summarizeSGP, visualizeSGP, and outputSGP

Longitudinal Student Assessment Data in LONG format with DATE for SGPt analyses.

Description

A dataset comprising a subset of 3 years (and time periods) of interim assessment early literacy, reading and mathematics data suitable for time dependent student growth percentile (SGPt) and percentile growth projection/trajectory analyses. The dataset is in LONG format with each record representing a unique student, by year/time period by content area combination. The example data is used in examples and illustrations in the enclosed documentation to show how SGPts can be operationalized across years with the results being used to produce a variety of high quality visualizations both at the aggregate (e.g., school) and individual level.

Format

A data frame of student level observations for five years and two content areas for the following variables.

COUNTRY  Variable indicating the COUNTRY associated with test record.
STATE    State associated with the test record.
VALID_CASE  VALID_CASE variable.
CONTENT_AREA Variable indicating content area associated with test record.
YEAR     Variable indicating the year associated with the test record.
DATE     Variable indicating the year associated with the test record: Must be in YYYY-MM-DD format.
ID       Unique student identifier associated with test record.
GRADE    Variable indicating the grade associated with the test record.
SCALE_SCORE Variable providing the scale score associated with the test record.
SCALE_SCORE_RASCH Variable providing the Rasch score associated with the test record.
SEM      Variable indicating the standard error of measurement associated with the scale score.
ACHIEVEMENT_LEVEL Variable indicating the achievement level associated with the scale score.
